ParkingVision

PARKINGVISION SECURE · SECURITY & EVIDENCE

Every transit documented.

Security and evidence for entrances, premises and whole networks of sites — even entirely without a parking fee. A black/whitelist reports unwanted vehicles and lets authorised ones pass unnoticed. All with a photographic record, all on one map.

Black/whitelist alarm

Map across all sites

Evidence images

No parking fee

STARTING POINT

Three gaps in security — three clear answers

If you secure a site, you want to know who drives through — and be able to prove it. ParkingVision Secure documents every transit and reports whatever does not belong there. Entirely without a parking fee.

Unwanted vehicles go unnoticed

A barred or conspicuous vehicle drives through — and nobody hears about it.

WITH SECURE

The blacklist triggers an alarm immediately; authorised plates on the whitelist pass unnoticed.

Incidents without evidence

After an event the record is missing: who was there, when, and in which direction?

WITH SECURE

Every transit with plate, direction, time stamp and image — stored in an audit-proof way.

Many sites, no overview

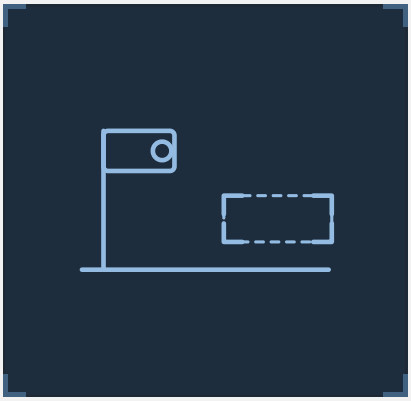

Several entrances and properties, but no common view of what is happening.

WITH SECURE

One map across all sites and cameras — events per site and in aggregate.

HOW IT WORKS

How it works — in three steps

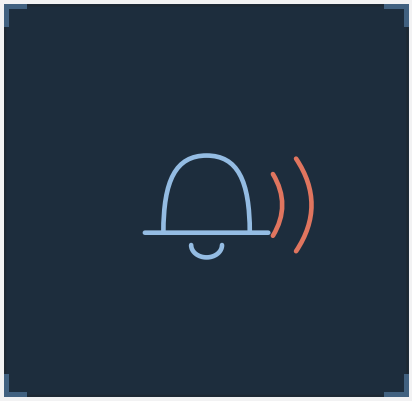

1 Capture

The camera captures every transit — plate, direction, time and image. One camera per direction is enough.

2 Compare

The plate is checked against the blacklist and the whitelist — authorised or barred, in real time.

3 Report

An alarm goes with an evidence image to the control centre or to those responsible; the event appears on the map and in the portal.

BENEFITS

What you get out of it

Security and control

Blacklist alarm — barred or unwanted plates trigger a report immediately.

Whitelist silent — authorised vehicles pass without a report, no noise for your team.

Real-time notification — alarm to the control centre, by email or to those responsible on site.

One direction is enough — one direction of travel per camera is sufficient; no building work is needed.

Evidence and documentation

Photographic record per transit — plate, direction and time stamp, cleanly brought together.

Event list — searchable by plate, period and site, export at a click.

Adjustable retention period — you determine how long events are kept.

Roles and rights — who sees and exports what is recorded and audited.

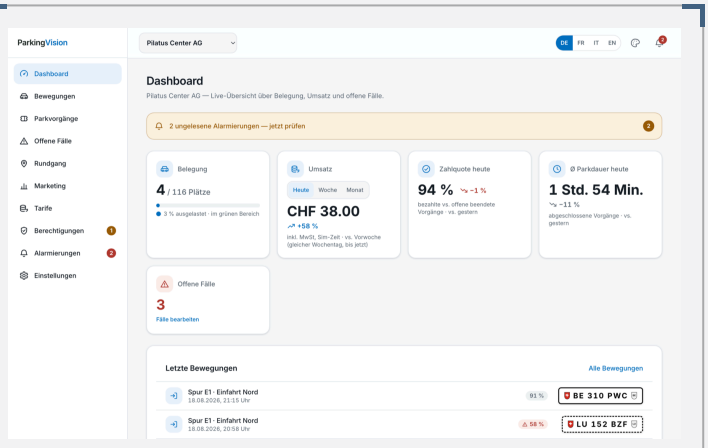

An overview of all sites

Map — all sites and cameras in one view, alarms located immediately.

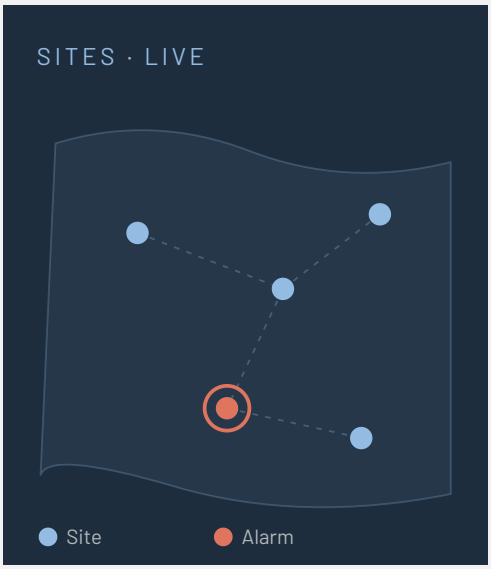

Per site and in aggregate — transits and alarms individually or across the whole network.

One client, many sites — cleanly separated, centrally managed.

Part of the platform — the same camera and portal base as the other products.

In the portal — events, transits and the live overview of all sites

Map across all sites — alarms located immediately (schematic)

PART OF THE PLATFORM

ParkingVision is a modular platform on a shared camera and portal base. Secure runs on its own — or combined with the other products in the family:

FreeFlow | **Secure** | Access | Smart | Parkleitsystem

WHO IT IS FOR

Company premises and works sites

Every entry and exit documented, barred vehicles reported immediately.

Residential developments and underground car parks

Monitor the entrances, evidence images when incidents occur — no barrier, no parking fee.

Public and critical infrastructure

Solid evidence of every transit, alarm to the control centre in real time.

Building sites and temporary entrances

Quickly installed, one camera per direction is enough — an overview from day one.

OPERATION AND DATA PROTECTION

Revenue model	SaaS licence per site — no parking fee
Cameras	One per direction is enough — no pairing of captures needed
Alarm routes	Control centre, email or those responsible on site, with an evidence image
Hosting	Switzerland — data sovereignty with the operator, strictly separated per client
Regulation	Designed to comply with the GDPR and the revDSG, retention period adjustable
Plates	CH, DE and AT
