ParkingVision

Park without barriers. Pay without an app.

Barrier-free parking management: cameras capture the plates at the entrance and the exit, your customers pay by QR code in the browser — and you keep the overview in the operator portal.

HOW IT WORKS

1 Drive in

The camera captures the plate as the vehicle passes — no ticket, no stopping, no barrier.

2 Pay by QR code

Scan the QR code, enter the plate, pay — in the browser, with no app and no registration.

3 Drive out

The exit camera closes the session. Paid? Safe journey — with no waiting.

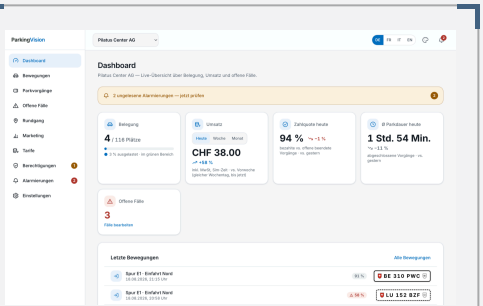

BENEFITS FOR OPERATORS

Every parking session is documented. Plate, time stamps and a photographic record for every session; open cases appear in the portal, and the parking notice is created with one click.

No barrier, no machine. No mechanism to service, to jam or to create queues. A pay station is planned, as an option.

Tariffs in the portal. Free minutes, hourly rate and daily maximum per site; «free parking from a minimum purchase» as an audited voucher with no till integration.

Permits without phone calls. Permanent authorisations, tenant quotas, self-registration by tradespeople — all audited in the portal.

The operator dashboard

PRODUCT FAMILY

ParkingVision FreeFlow

The core product: barrier-free capture, payment by QR code, management in the portal.

ParkingVision Smart

Live occupancy per site. Planned: occupancy per zone and simulation of the overflow.

Shopping centres · Public car parks · Property managers · Company premises · Open parking areas · Leisure and events

Hosting in Switzerland · data sovereignty with the operator · no vehicle-keeper lookup
Designed to comply with the GDPR and the revDSG · plates from CH, DE, AT
